FACILITATORS – NEO ONBOARDING

Using the NEO AI agent to *support innovators*

A one-day session to get hands-on with NEO, Vianeo's AI agent, understand the methodological framework that structures its conversations, and enable innovative project owners to use it optimally.

DURATION	FORMAT	GROUP	LANGUAGE	PREREQUISITES	TYPE
1 day	On-site or remote	6 to 12 people	FR / EN	None	In-house training

Learning objectives

1 Understand the logic of the Business Design method

Discover the key stages of the method and the concepts that underpin it (theoretical grounding, mindset, and connections with other methods).

2 Mobilize the NEO AI agent appropriately in your support work

Define everyone's roles in the support process, adopt the right posture as a facilitator and onboard the project owner, know Neo's rules of use and limits, leverage Neo's outputs (report, gauges, alerts) to highlight points of attention, develop recommendations for the project owner, help them implement their action plan and showcase their project to decision-makers.

Target audience

Anyone leading innovation projects or wishing to support innovative project owners in structuring their work: innovation officers (managers, coordinators, project owners), business developers, valorization officers, facilitators, consultants.

We do everything we can to adapt our training programs for people with disabilities. Contact our disability coordinator at j.marchetto@vianeo.com to explore possible solutions together.

Vianeo is Qualiopi-certified for its training activities, a quality certification officially recognized by the French government.

Program

Discover · The Business Design methodology and approach

Introduction to the fundamentals of innovation and the innovator's mindset. Discovery of the Business Design method and its place within the innovation management system and the company. Links with other innovation methods.

Apply · NEO on a project

Team-based application, analysis of a conversation, of the gauges and alerts and of the report produced, links with the method, feedback and Q&A.

Share · Best practices

Summary of Neo's strengths and limits, differences from a classic generative AI, Neo's rules of use and role allocation, demonstration of the admin and sharing features, questions of ethics and confidentiality.

Build · Your deployment scenario

Plan how to integrate NEO into your workflow (when to use Neo, when not to use it, for which project owners/projects, what onboarding for the leaders…) and integration into the support journey.

Teaching methods

- Discovery of the Business Design method through a card game and presentation of the theoretical foundations
- Application to a team project with Neo's support, sharing and collective analysis
- Individual and collective brainstorming, debriefing and discussion
- Round-table discussions and participant feedback

Assessment methods

- Participants complete a final multiple-choice quiz at the end of the training to validate the skills acquired.

Enrollment lead times

In-house training: Indicative lead time of 4 to 6 weeks from validation of the request (signed quote). This lead time mainly depends on coordinating the availability of participants and the trainer; it may be shortened or extended depending on the context and the level of customization desired.

Give your support teams an AI copilot faithful to the method.

Let's build the onboarding session tailored to your teams.
